

Advances in Single and Multi-Antenna Technologies for Energy-Efficient IoT

Student Gilles Callebaut (MELICTes)
Promotor dr. Gilles Callebaut
Co-promotors ing. Jarne Van Mulders, ing. Guus Leenders

Instructions: This template is without obligation. Feel free to change this template however you like. The description of assignment should, however, include the following: title, names of the students, promotor and co-promotors, date, sections: positioning of the thesis, objectives and planning. Use prefixes or postfixes to indicate the version or date. In this way, both you and your supervisors have the same naming convention, e.g., *description_assignment_20221104.pdf*. Discuss this description with your supervisors. Note: you may have other tasks deadline and for sure your supervisor(s) do. Hence, plan!

Positioning of the thesis

Instructions: Sketch the context and the problem statement in an appealing manner, such that it can also attract interest from non-experts.

Objectives

Instructions: You formulate a few very concrete objectives you want to realise in your thesis. This can be a list-format. The objectives are the initial research questions. These objectives serve as a basis to evaluate the results obtained at the end of your thesis.

Planning

Instructions: Make a work plan. Divide your work in work packages and define a few key milestones. Take into account dependencies between tasks.
